EXPERIENCE

ICICI Lombard GIC

August 2025 – Present

Backend Developer, Payments Platform

- Lead developer of a centralized payments platform processing INR 60 crore+ in monthly payments across all of ICICI Lombard's insurance products, consolidating 15+ fragmented legacy payment systems into a single service.
- Integrated the Juspay payment gateway and its payment webhooks for initiation, status tracking and refunds, and built outbound webhooks that push payment events to the 40+ product teams integrated with the platform; architected as .NET Core microservices on PostgreSQL, sustaining 99.9% uptime.
- Designed Hangfire background jobs and Kafka-based event processing (100,000+ events daily) for policy generation and refund workflows, with retry and fallback strategies, automatically processing pending payment cases.
- Standardized the payment flow with unified error handling and end-to-end audit logging, cutting the time to trace a failed payment from 2–3 hours to 15–30 minutes.
- Single-handedly built a support dashboard showing the complete payment-to-policy trail, with a one-click resolve action that re-runs the remaining flow from whichever step a case is stuck at, reducing support ticket resolution time by 40%.
- Built a Model Context Protocol (MCP) server in .NET exposing 7+ insurance workflows as tools for AI agents, including policy enquiry, quote and proposal generation, payment link generation, policy issuance, claim resolution and self-inspection (January 2026).

Aignosis

January 2025 – July 2025

AI / Software Engineer Intern

- Architected the end-to-end backend in Python and FastAPI with auto-generated clinical reports, serving 1,500+ autism screenings weekly.
- Built the computer-vision pipeline behind the webcam screener: CNN-based gaze estimation (PyTorch, MediaPipe facial landmarks), saccade extraction and head-pose calibration on consumer hardware, turning a 5-minute stimulus video into the feature set scored by the risk model.
- Ran 500+ supervised screening sessions across clinics and preschools, building a labeled edge-case dataset used for model retraining that reduced calibration dropout among toddlers.

PROJECTS

K-SOS - Student Safety App

July 2025

- Built a panic-button app with real-time location tracking, deployed by Rajasthan Police for 150,000 students in Kota; reached 95,000+ downloads and ranked #3 globally in the Parenting category on Google Play.
- Covered by 10+ national media outlets, including Aaj Tak, ETV Bharat and Dainik Bhaskar. *Tech: Flutter, Firebase, React, OpenStreetMap API.*

Autonomous Warehouse Inventory Drone

2023

- Developed an autonomous hexacopter for warehouse inventory scanning with 3 ms control latency, placing All India Rank 4 at Godrej Dronelog'23, IIT Bombay Techfest. *Tech: Pixhawk, Raspberry Pi, ArduPilot, Python, React, Firebase.*

LANGUAGES & TECHNOLOGIES

Languages

C#, Python, C++, JavaScript, SQL, Dart

Backend

.NET Core, FastAPI, Django, Node.js, REST APIs, Webhooks, Microservices, Kafka, Hangfire, J

Databases

PostgreSQL, MySQL, Firebase

AI/ML

PyTorch, ONNX Runtime, MediaPipe, OpenCV, TensorFlow, MCP

Frontend & Mobile

ReactJS, NextJS, Flutter, Tailwind CSS

DevOps & Cloud

Docker, Git, Google Cloud, Oracle Cloud

Can Work With

Haskell, F#, Scala, Elixir, PureScript

EDUCATION

B.Tech. in Computer Engineering, SVKM's MPSTME, NMIMS University

2025

CGPA: 9.2/10
